

Two-piece Thru-Shank design of Pilot bit

Decrease of cost when pilot disc can be changed (outside of pilot wears out faster than center)

For example same Thru-Shank (N240) can be used for diameters 711, 813, 914 and 1016mm

The system of internal channels allows air to flow freely between Thru-Shank and Pilot disk

Reliable fixation of Thru-Shank and Pilot disk, which prevents unscrewing during drilling

Available in diameters 711-1524mm
